AD - 1 Use case Diagram

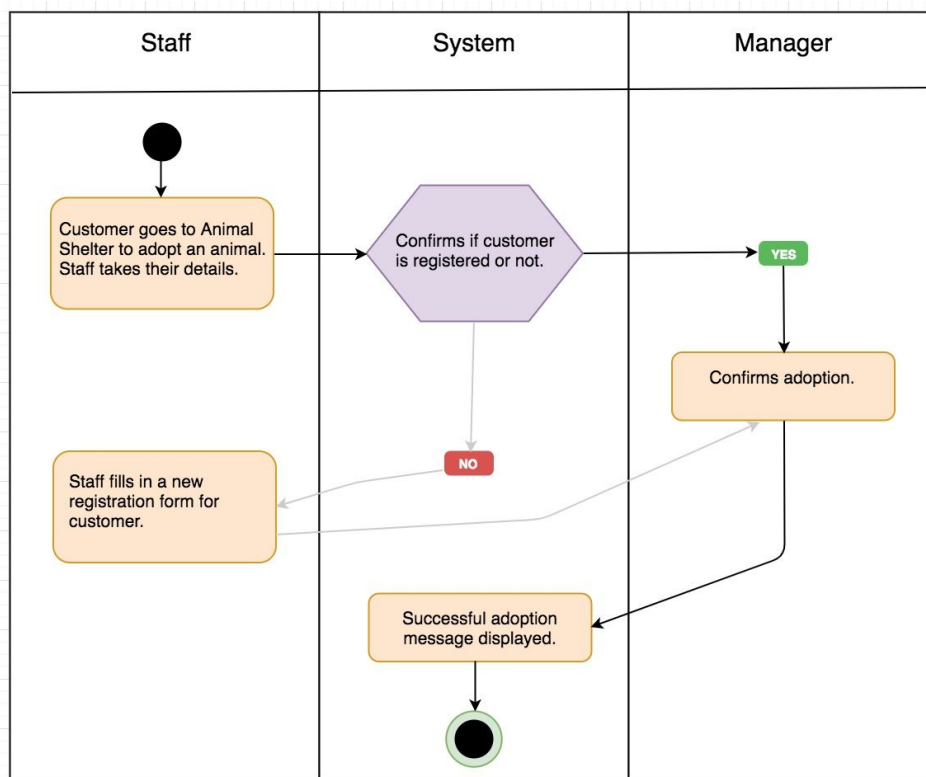

AD - 2 Create a Class diagram using your Use case diagram.

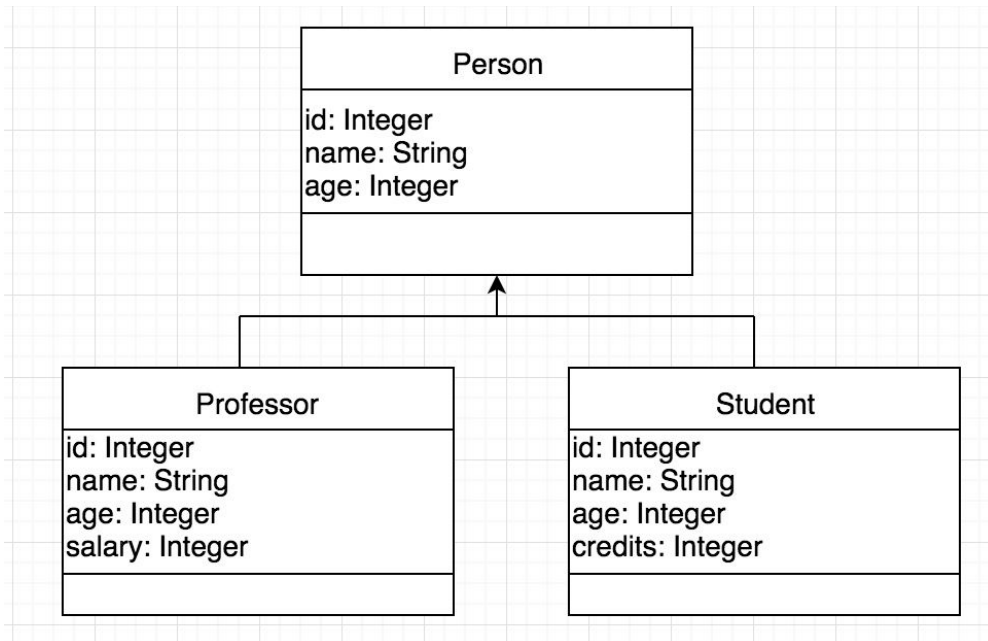

AD - 3 Object diagram

AD - 4 Activity diagram

AD - 5 Inheritance diagram

AD - 6 Implementations Constraints

	Constraint and possible effect	Solution
Hardware and software platforms	App only displays correctly on desktop which means it does not satisfy mobile users. Additionally, app was only tested on Chrome so other browsers might not display app properly either.	Use a responsive design, provide fallbacks, use media queries, etc.
Performance requirements	App has been deployed to Heroku so it can 'go to sleep' after an hour of inactivity. The next user to access any of its resources will have to wait while the app spins up, resulting in a suboptimal user experience.	Set <code>setInterval</code> , use <code>KeepAwake</code> , install the NewRelic Heroku Addon to set up availability monitoring, etc.
Persistent storage and transactions	Images were added to the database as <code>String (url)</code> . This means the app relies on those urls being active or the images won't show.	Upload files to S3 in Ruby with Paperclip instead.
Budgets	No budget used.	Project created whilst studying at CodeClan.
Time	Due to the short time frame of one week, some of the extensions were not completed in time.	Search functionality was added after presentation.
